

CAMPUSPAL: GENERATIVE AI-DRIVEN INSTITUTIONAL INFORMATION ASSISTANT

Authors: Group 14 | • Vaibhav Bura • Yash Desai • Vivek Dalvi • Pratik Dhas
Guide: Dr. Bharti Khemani

Problem Statement

- Institutional information (admissions, fees, placements, faculty) is scattered across multiple webpages, making it difficult to access.
- Manual searching is time-consuming, and traditional chatbots may generate inaccurate responses.

System Architecture

System Layer Overview

Results

The system successfully provides accurate and context-aware responses for campus-related queries.

- Faster information retrieval
- Reduced hallucination using a multi-layer verification system
- Accurate answers for admissions, fees, faculty, and placements
- User-friendly chatbot interface

SDG GOALS

SDG 4 – Quality Education

Improves access to reliable academic information for students, parents, and faculty.

SDG 9 – Industry, Innovation and Infrastructure

Promotes the use of AI technologies to enhance digital infrastructure in educational institutions.

Conclusion

CampusPal improves information accessibility in educational institutions using AI.

The combination of RAG, vector search, and LLM reasoning ensures reliable responses.

This approach can be extended to other universities to build intelligent campus assistants.
